Project name:

- **Gifto**

Project objective:

The objective of Gifto is to simplify the gift-selection process for both businesses and individual customers by helping them find the right gift based on their specific needs.

For B2B customers, the platform focuses on:

- Event type and occasion
- Number of recipients
- Budget
- Gift type
- Customization and branding
- Delivery deadline

For B2C customers, the platform focuses on:

- Occasion
- Recipient
- Budget
- Gift preferences
- Personalization needs

The project also aims to generate qualified leads and improve customer conversion and follow-up through AI, recommendations, CRM, and automation.

Project scope:

The MVP will provide a simplified gifting experience for both B2B and B2C customers, including:

- One landing page
- A 5–6 question gift-selection questionnaire
- B2B and B2C customer paths
- 10–15 sample products
- 3–4 main occasion/event categories
- Rule-based recommendation system
- Simple AI Gift Assistant / chatbot
- AI-generated gift messages and product-related content
- “Request a Quote” and “I’m Interested” options
- Basic CRM using Google Sheets or Airtable
- One automated follow-up workflow using Make or n8n
- Simple performance dashboard
- Social media campaign targeting both businesses and individual customers

The initial B2B focus will include wedding planners, hotels, and event & catering companies, while the B2C side will target individuals looking for gifts for different personal occasions.

Corporate companies can be considered as an additional B2B segment as the project develops.

Project plan:

1. Discovery & Market Research

Research the Egyptian gifting market across both B2B and B2C segments, including competitors, suppliers, product categories, pricing, customization options, delivery capabilities, and customer pain points.

2. Target Audience Analysis

Define the main B2B and B2C customer segments and identify their needs, behaviors, budgets, decision factors, and buying journeys. Develop relevant buyer personas.

3. Marketing Strategy

Develop separate messaging and content strategies for B2B and B2C audiences while maintaining one clear brand positioning and value proposition.

4. Recommendation, AI & Automation

Build a rule-based recommendation system using factors such as occasion, budget, quantity, gift type, customization, and deadline. Add an AI Gift Assistant to understand customer needs and provide personalized suggestions.

5. MVP Implementation

Build the landing page, B2B/B2C questionnaire paths, sample product catalog, recommendation engine, AI assistant, CRM, automated follow-up workflow, and performance dashboard.

6. Testing & Optimization

Test the MVP with both B2B and B2C users and measure questionnaire completion, recommendation relevance, selected products, “Request a Quote” actions, “I’m Interested” actions, and follow-up performance.

7. Final Consultancy Case

Present the complete journey from market research and customer analysis to marketing strategy, AI & automation, MVP development, testing, results, and recommendations.

Project overview :

It is a smart B2B & B2C gifting platform designed to help both businesses and individuals find the right gifts and giveaways quickly and easily.

For B2B customers, such as wedding planners, hotels, event and catering companies, and potentially corporate companies, the platform helps them find gifts for events, large groups, clients, employees, and guests based on quantity, budget, occasion, customization needs, and deadline.

For B2C customers, the platform helps individuals find suitable gifts for personal occasions based on the recipient, occasion, budget, preferred gift style, and customization needs.

Instead of searching through hundreds of products, customers answer a short set of questions or interact with the AI Gift Assistant. The platform then recommends 2–3 suitable gift options and explains why each option fits their needs.

Customers can then show interest, request a quotation when applicable, or contact the sales team.

The platform combines smart recommendations, AI, automation, and CRM to make gift selection faster, easier, and more personalized.
